

Founded in 1925, Copenhagen Airport was one of the first civil airports in the world. The early years were characterized by the pioneering spirit in a day and age when flying was for the privileged few.

Copenhagen Airports A/S is a listed company that owns and operates the airports at Kastrup and Roskilde. With 1700 committed employees entrusted with everything from planning the airports' future and the services they offer to the daily cleaning and maintenance of the airport.

Copenhagen Airports makes its infrastructure, buildings and service facilities available to the many companies that have business operations at the airport. The company shares a common goal: to ensure that all passengers have a pleasant stay at the airport.

BUSINESS CHALLENGE

Copenhagen Airport is expanding the airport to accommodate the traffic development and meet the requirements of our passengers and business partners. The expansion takes place according to a ten-year rolling investment plan, ensuring a flexible and phased expansion according to market requirements. The airport has a number of passenger improvement projects on the drawing board. The charges airlines pay to use the facilities of Copenhagen Airport have gone down and are now among the lowest of major airports in Europe. A comparison of the level of charges at the 25 largest airports in Europe shows that Copenhagen Airport is now number nine on the list of airports with the lowest charges.

One of the tools that Copenhagen Airport uses for project management is Microsoft Project®.

"We needed a tool to supplement our company's need just to view and open project files created by project managers with Microsoft Project®. We wanted to deploy a lightweight Project 'viewer' software application that met our company needs and could reduce our license costs for expensive Microsoft Project® installations. Another important part that we were looking for was the same look and feel of Microsoft Project®."

"We needed a tool to supplement our company's need just to view and open project files created by project managers with Microsoft Project®. We wanted to deploy a lightweight Project 'viewer' software application that met our company needs and could reduce our license costs for expensive Microsoft Project® installations.

Another important part that we were looking for was the same look and feel of Microsoft Project®."

SEAVUS PROJECT VIEWER SOLUTION

In an effort to reduce software costs, Copenhagen Airport evaluated a number of Microsoft Project Viewers that are on the market. By carefully examining the overall features and costs against the benefits that each solution under review possessed, Copenhagen Airport selected the Seavus Project Viewer, and easily deployed it.

“Deploying Seavus Project Viewer was very simple as the software was in an msi-format.”

BUSINESS BENEFITS

Copenhagen Airport has immediately been able to exploit the benefits of using the Seavus Project Viewer once it was installed.

“The product’s high quality, Microsoft-centric look and feel closely mirrors the fully enabled Microsoft Project so that any sort of user training has been unnecessary. We were very interested in cutting our software licensing costs and the Seavus Project Viewer did exactly this, without sacrificing the look and feel that our employees are used to.”

The Seavus Project Viewer is now installed on 50 workstations at Copenhagen Airport.

”The product’s high quality, Microsoft-centric look and feel closely mirrors the fully enabled Microsoft Project so that any sort of user training has been unnecessary. We were very interested in cutting our software licensing costs and the Seavus Project Viewer did exactly this, without sacrificing the look and feel that our employees are used to. ”
